Withdrawal Management Program for Men

In a structured, tranquil setting, our withdrawal management program for men offers daily groups, MAT education/counseling and case management services. On-site nursing staff are available 24/7 to assist with detox protocol and medical needs, along with experienced Behavioral Healthcare Technicians and clinical staff who help clients navigate further treatment options within our continuum of care, including residential programming when appropriate.

Residential Treatment for Adult Men & Women

In our comprehensive residential treatment program, clients reside in gender-specific housing. In this structured environment, clients receive medical care as needed, participate in therapy, learn about substance use disorders and co-occurring conditions and develop the life skills necessary for success outside of treatment on their continued path to long-term sobriety.

EAGLE Program

Our innovative Excellence and Greater Learning Experience (EAGLE) program is ideal for high-risk clients, especially those with multiple prior treatment episodes. Individuals engage in animal-assisted therapies, farm-to-table activities, life skills and job readiness development, offsite 12-step meetings and relapse prevention programming. The EAGLE program is designed to enhance the traditional treatment experience through hands-on, engaging modalities that support lasting recovery and personal growth.
